New entry form designs and logic

@Chris Aitkenhead, can I get your eye on these please. There are strain-based PPC ones too. I've attached the Claude skill for designing these if you or the design team want to have a go, but as far as copy and content goes, this is the direction.

In terms of flows: once this step is done we should be able to pretty much one-shot them with the Claude skill plus your design system, and @Riley Brunett to refine and QC.

What's attached (see the comment below)

- Four boards, one per brand: co-branded popups by traffic source (Seed Supreme 8, Homegrown 8, ILGM 6 incl. forum and blog, USOA 8). Each card shows the trigger rule, the offer code and whether it is new, a replacement or an existing form.

- PPC strain board: one popup per strain searched, triggered by the ad group's `utm_content=<strain-slug>` , using each site's own PDP image.
- `partner-popups-spec.md` : the build table (source, trigger, line, headline, offer, status).
- `symple-source-popups-skill.zip` : the Claude skill ([SKILL.md](#) with the anatomy, brand tokens, trigger conventions, claims rules) plus the build scripts.

Rules baked into the designs

- One popup per traffic source, one first-order offer per person; the welcome flow's Email 1 repeats the same promise.
- Partner logo only where the partner has approved it. No logo tile for paid search or our own Meta ads.
- Codes are the ones already in use; the three marked "confirm" (LEAFLY20 on SS, ILGM20 and CANNIGMA20 on USOA) need a decision.
- Every popup writes `acq_partner` , `acq_intent` , `acq_strain` and `offer_shown` to the profile at submit.
- Claims only as the sites already state them (guarantee terms, seed counts, COAs).

Status

Drafts for review. Nothing has been built or changed in Klaviyo.

Designs attached to this task (see Attachments):

- **seed-supreme-partner-popups.png, homegrown-partner-popups.png, ilgm-partner-popups.png, usoa-partner-popups.png**: co-branded entry popups by traffic source, one board per brand. Each card carries its trigger rule, offer code and status (new / replaces / exists).
- **ppc-strain-popups.png**: paid-search popups that name the strain searched, triggered by the ad group's utm_content, using the sites' own product images.
- [partner-popups-spec.md](#): the build table for every popup.
- [symple-source-popups-skill.zip](#): the Claude skill ([SKILL.md](#): anatomy, brand tokens, triggers, offer and claims rules) plus the scripts that render the boards.

@Chris Aitkenhead: eyes on the visuals and the design system fit. @Riley Brunett: the trigger and offer logic per card, and the three codes marked "confirm".

Nothing is built in Klaviyo yet; partner logos are for internal review until each partner has approved use.
